## MHJ

ATTACHMENTS

The team at MHJ Group have a serious passion for the Mining, Pipeline and Construction Industry. In 2020 MHJ Group set about building on their 30 year foundation a global brand dedicated to supplying **HIGH QUALITY** Equipment, Attachments and Services to those in the Mining, Pipeline & Construction Industries.

One of our visions for expansion is the introduction of MHJ Attachments. We build extremely high quality attachments using the worlds best suppliers of steel and wear parts in a fraction of the time. Our goals are simple, to build attachments at a higher quality and faster than OEM at a lower cost.

Our location is paramount to the success of MHJ Attachments. Located in the United Arab Emirates we have the benefit of stability in energy costs and labour force, two of the greatest factors effecting anyone in the Mining, Pipeline & Construction Industries today. Dubai being a global shipping hub and centrally located to Africa, Australasia & the USA adds significant value for clients.

# DESIGN & ENGINEERING

MHJ Attachments have invested heavily in our own in-house team for design & engineering. A deep knowledge of our target industries having come from the field, leads to high quality design and fit for purpose attachments. Having said this, it is our clients who ultimately know their requirements and their conditions best. Collaborating with our customers ensures what is eventually fitted to their machines

gives a long lasting, cost effective solution for their attachments. Using the latest **SOLIDWORKS™** software our trained staff provides the foundation required for our fabrication team to achieve excellence. We are also highly flexible, ensuring we move quickly for changes to our attachments as our customers provide real world feedback from their various global locations.

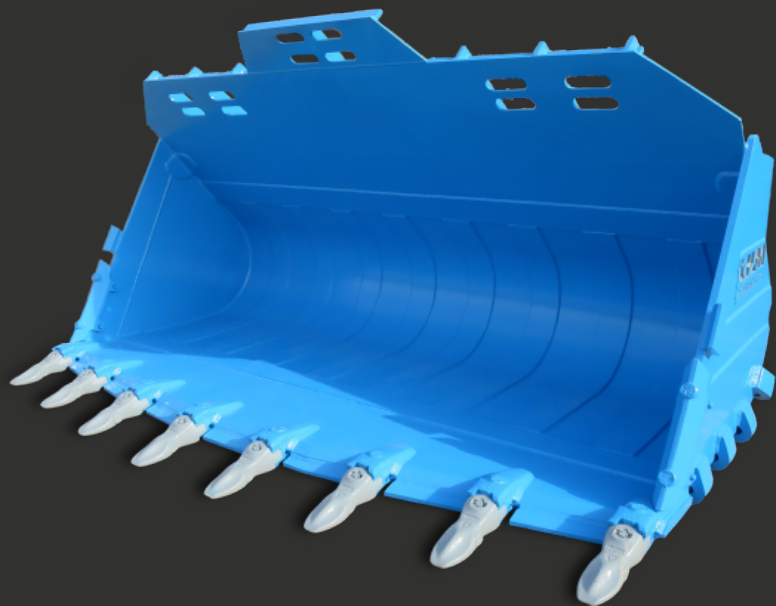

# BUCKET FABRICATION

Focused specifically to the Mining & Trenching sector, MHJ Attachments builds a range of high quality, fit for purpose products. In the Mining Sector our focus is on Wheel loader buckets starting at 6 cubic meter and up, excavators from 85 tonne class and up. In the Trenching Sector we specifically focus on the 35 to 75 tonne class range with trenching buckets and rippers.

In both sectors we specialise in High Quality in Heavy Duty applications where durability and life cost mean everything. Sourcing high quality steel and consumables from Europe is as important as stress relieving the final product. Even collaboration with our customers preferred LIP SYSTEM partner ensures a quality product, in a timely manner at the most cost effective price.

The Mining Sector demands excellence in everything. The digging attachments for their equipment is no different. Uptime is everything and a quality product can make all the difference for both production and profitability. MHJ Attachments can only succeed if our clients succeed. **HIGH QUALITY, IN A TIMELY MANNER, AT A LOWER COST** is what we supply.

# TRENCHER PARTS

The trenching industry can best be described as BESPOKE. Expensive equipment with one purpose and one purpose only, dig trench in the most cost effective way possible. At MHJ Attachments our DNA is in Trenching Equipment and has been for over 25 years. We understand the issues facing the industry, in particular the high cost and lengthy delivery times of wear parts.

With the introduction of our own range of Trencher Wear Parts, MHJ Attachments will redefine your wear part supplies moving forward. From complete chain assemblies, boom sections

or complete assembly, head-shafts, sprockets, idler assemblies, wear plates and even down to complete surface mining attachments. If it's on the business end of the trencher, MHJ Attachments has a solution.

Only quality steel and consumables from Europe with world recognised tooth and holder brands go into building our range of trencher parts. Parts specifically for Tesmec, Trenchor & Vermeer in the 40 tonne class and up. **HIGH QUALITY, IN A TIMELY MANNER AT A LOWER COST. MHJ ATTACHMENTS.**

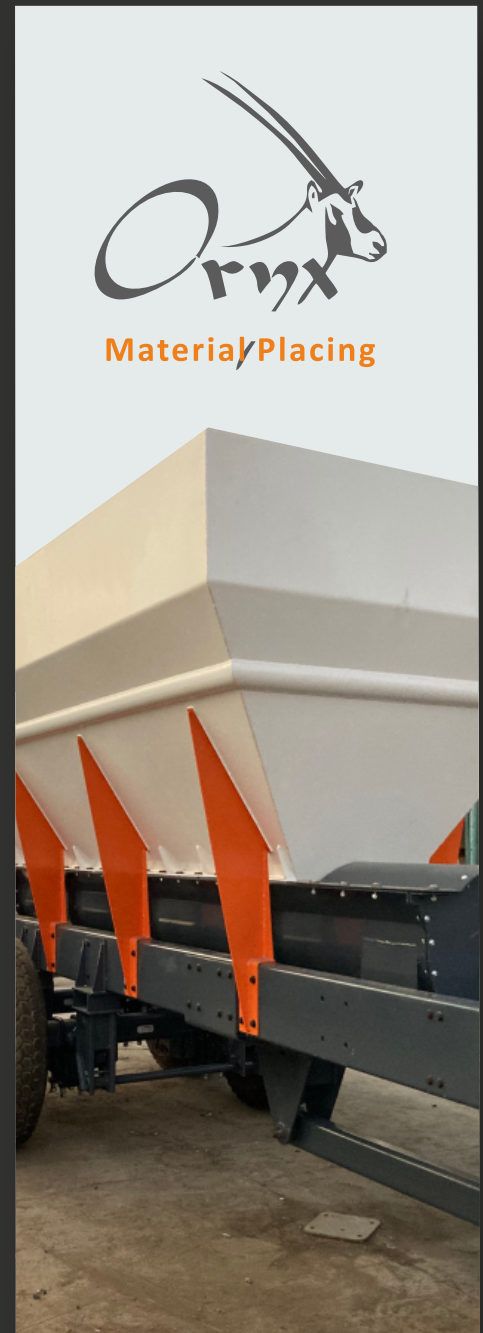

# CUSTOM FABRICATION

The team at MHJ Attachments have a long history working in the R&D field building one-off prototypes specifically targeting the removal of people & machines from industry.

Building safer, more productive projects is in our **DNA**. This philosophy continues where we design, develop and fabricate a range of equipment under our **ORYX EQUIPMENT** Brand specifically for the Pipeline Industry.

If you can dream it, more than likely we can build it. If you have a troubled area of your operation, more than likely we can provide a solution. Custom fabrication to us is about solving problems which lead to more production & profit.
